

POREX® Hydrophobic Small Pore Size Cylinder

7618

Parameters	Value
Technology	Sintered
Material	Polyethylene (PE)
Property	Hydrophobic
Shape	Cylinder
Diameter	.117 ± .007 in / 0.117 mm
Length	.15 ± .01 in / 3.81 mm
Pore Size	6 - 25 µm
Pore Volume	32 - 62 %

Description:

Hydrophobic cylinder for small pore size applications in the range of 6-25µm. Typically used for filtration and venting. Each sample bag contains approximately 300 samples.

Final tolerances for commercial production will be supplied and agreed upon with a *Mutually Understood and Acceptable Specification Document*.

Disclaimer

This standard sample is for evaluation of form, fit, and function to determine product specification requirements for custom products. Please reference the values in our data sheet for specification guidelines of standard products. In Vitro Diagnostic (IVD), medical-surgical and pharmaceutical samples are for investigational use only and subject to specific application, test condition and regulatory requirements.
